

Optical module model SFP28

Overview

25G SFP28 is the new access/server baseline; deploy it for port density and long-term value. Selection is driven by power, thermal limits, cabling, and O&M risk—not speed alone. SFP-family and QSFP-family. An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment—including switches, routers, servers, and media converters—to support different physical media, such as optical fiber or copper, without replacing the host hardware. SFP transceiver is signal conversion between the device and the link. In fiber applications, it. This article provides a comprehensive comparison of mainstream optical transceivers, including SFP, SFP+, QSFP+, QSFP28, and QSFP-DD. It explains their technical differences, compatibility considerations, and ideal use cases to help readers choose the right module for enterprise and data center. SFP28 supports 25 Gbps per lane. It uses the same form factor as SFP/SFP+ but with higher-speed electronics.
