

PD-A Distribution Box

Article Overview

A PD-A Distribution Box is a modular power distribution unit designed to safely split and manage electrical power for multiple devices or systems, commonly used in industrial, telecommunications, or professional audio applications.

Overview and Function

A PD-A Distribution Box serves as a centralized point to distribute electrical power from a primary source to multiple secondary circuits. It ensures organized power management, protection, and easy connection of multiple devices, such as amplifiers, servers, or industrial equipment. These boxes are designed to handle specific voltage and current ratings, often including features like modularity, finger-safe protection, and DIN-rail mounting for compact installation .

Key Features

- **Modular Design:** Many PD-A boxes, such as E-T-A Power-D-Box® systems, are highly modular, allowing customization for different voltage ranges, protection types, and project-specific requirements .
- **Voltage and Current Ratings:** Depending on the model, PD-A boxes can handle AC or DC applications, with ratings up to AC 230V or DC 80V, and currents ranging from tens to over a thousand amperes .
- **Mounting Options:** They are typically designed for rackmount or DIN-rail installation, with stackable or compact enclosures suitable for control cabinets or audio racks .
- **Safety Features:** Many units include finger-safe insulation (IP20), recessed termination screws, and protective covers to prevent accidental contact with live pa...
