

Peru power distribution box renovation

Overview

The project involves upgrading critical core equipment, replacing turbines and generators, enhancing fire-suppression systems, and renewing other essential components through sustainable procurement practices. A growing. We perform specialized services in maintenance, repair and electromechanical assembly of transformers, maintenance of yard equipment, electrical room equipment and transmission lines, among others. Peru has rewritten the rules governing its power grid, giving the government new powers to clear out stalled projects and reassure investors, in a bid to modernise a network struggling to keep up. The project consists of (a) lines and substations ranging from 225 volt to 220 KV; (b) meters and other equipment for new connections; and (c) radio equipment., in regions like Cajamarca, Ancash, and Apurímac), and urban development across major metropolitan zones like Lima, Arequipa, and Trujillo. DESIGN AND DEVELOPMENT: It is performed by Peruvian.
