

Ping access switch

Overview

The ping test uses ICMP echo requests and ICMP echo replies to determine if another device is alive. It also measures the amount of time it takes to receive a reply from the specified destination. 0 trunk port enabled for vlan 103 able to ping access switch Access switch management vlan 192. The symptoms are: Pinging from a user's machine to the server - no replies Tracert from a user's machine to the server - gets to the SVI gateway on the. Can't Access Switch GUI, but I can ping it. The management IP was already set on one switch, but the GUI will not pull up. Why?

Our. I'm facing an issue where my laptop should be able to ping all VLANs, but it can only ping the VLAN it's assigned to. VLAN routing seems to be working on the core switch. I'm currently troubleshooting a network i built and I'm having an issue with ping connectivity, i have set up DHCP and DNS and my end devices can get IP's from DHCP as well as i have intervlan connectivity and all of my end devices can ping each-other, as well as my router can ping my end devices.
