2. Imported design is convenient for expansion.

The design of two inlets saves space and allows for rear line entry.

Article Overview

Power over Ethernet (PoE) switches and Network Video Recorders (NVRs) work together to create efficient surveillance systems by transmitting both power and data over a single Ethernet cable.

What is a PoE Switch?

A PoE switch is a networking device that provides power and data connectivity to devices such as IP cameras, VoIP phones, and wireless access points through Ethernet cables. This eliminates the need for separate power supplies, simplifying installation and reducing cabling complexity. PoE switches are essential for modern IP camera systems, allowing for longer cable runs without significant power loss .

What is an NVR?

A Network Video Recorder (NVR) is a device that records video footage from IP cameras. When integrated with PoE technology, it can receive power and data from the same Ethernet cable, streamlining the setup. NVRs manage video data and provide centralized control for surveillance systems, making them ideal for both small and large installations .

Benefits of Using PoE Switches with NVRs

- **Simplified Cabling:** By using PoE switches, you can connect multiple IP cameras to a single switch, reducing the number of cables needed and simplifying the installation process .
- **Centralized Power Management:** PoE switches provide power directly to the came...
