

# Price of secondary power distribution boxes in mines

## Article Overview

Secondary power distribution boxes for mining typically range from several hundred to several thousand dollars, depending on capacity, configuration, and manufacturer.

### Overview

Secondary power distribution boxes, also known as junction boxes or distribution panels, are critical for safely routing electricity from primary sources to various mining equipment and infrastructure . These boxes are designed to withstand harsh underground or surface mining environments, including high humidity, dust, and mechanical stress . They often include features such as circuit breakers, load management controls, and monitoring systems to ensure operational safety and reliability .

### Price Range

- Small to medium distribution boxes suitable for portable or modular applications, such as the GEK Mk2, are priced around £740 (excluding VAT), which is approximately \$900 USD . These are typically used for lower amperage loads or temporary setups.
- Larger, high-capacity boxes for permanent installations in underground mines, often integrated with dry-type transformers or modular switchgear, can cost several thousand dollars, depending on specifications such as amperage rating, enclosure material (stainless steel or ruggedized), and additional safety or monitoring feature...
