

# Rear Assembly Electrical Box Inlet Wiring

## Article Overview

For a 50 Amp power inlet box, connect black and red wires to 240V terminals, white to neutral, and green to ground, following proper conduit or cord installation methods.

### Wiring Overview

When wiring a rear assembly electrical box (power inlet box) for a generator or transfer switch:

- Use copper wire only and follow approved wiring methods ( ).
- Wire colors typically follow standard coding: black and red for 240V lines, white for neutral, and green for ground ( ).
- Wire sizing: For a 50 Amp inlet, use AWG #8 minimum to AWG #4 maximum depending on distance and load ( ).

### Terminal Connections

- 240V Line Wires: Connect black and red wires to the brass terminals marked X and Y inside the inlet box ( ).
- Neutral Wire: Connect the white wire to the nickel-plated terminal marked W ( ).
- Ground Wire: Connect the green wire from the inlet box to the green ground screw inside the cabinet. If a separate ground is required, connect it to the same ground screw ( ).
