

Router Fiber Optic Replacement

Article Overview

To replace a router in a fiber optic network, connect a compatible router to the Optical Network Terminal (ONT) and configure it according to your ISP's settings.

Step 1: Check Compatibility

Fiber internet uses an Optical Network Terminal (ONT) instead of a traditional modem. Your new router must have a Gigabit Ethernet WAN port to connect to the ONT and support the speed tier of your fiber plan. Routers designed for DSL or cable (coaxial) connections will not work. For optimal performance, a Wi-Fi 6 or 6E router is recommended to handle high-speed fiber connections and multiple devices efficiently .

Step 2: Prepare Your Network

- Ensure the ONT is installed and activated by your ISP.
- Note any required VLAN, PPPoE, or IPoE settings, especially if your ISP provides TV or VoIP services .
- Decide whether to fully replace the ISP router or use it in bridge mode while your new router manages Wi-Fi and LAN functions .

Step 3: Connect the Router

- Disconnect the existing router from the ONT.
- Use an Ethernet cable to connect the ONT to the WAN port of your new router .
- Power on the router and wait for it to initialize....
