

Specifications and dimensions of iron electrical distribution boxes

Article Overview

Iron electrical distribution boxes are typically made of 1.2–2 mm thick steel, wall-mounted, with IP55–IP65 protection, and dimensions ranging from 300×200×150 mm to larger custom sizes.

Material and Construction

Metal distribution boxes are generally fabricated from cold-rolled or galvanized steel plates with thicknesses ranging from 1.2 mm to 2 mm for the body, and 2–3 mm for back panels in power distribution cabinets. They are painted in RAL 7035 gray for corrosion resistance and may include rubber gaskets on doors to ensure watertightness. Doors often feature quarter-turn closures or Godrej-type 3-position locks for security, with hinges concealed from the outside.

Protection and Standards

- IP Rating: Commonly IP55 or IP65, providing protection against dust and water jets, suitable for outdoor installation.
- Earthing: Boxes include solid earthing points on either side to ensure safety.
- Compliance: Designed according to low-tension directives and national electrical standards, with type-test certificates required for IP protection, impulse, and short-circuit tests.
