

Specifications of vertical brackets for cable trays

Article Overview

Vertical brackets are designed to support cable trays securely, accommodate various tray widths, and allow fast, hardware-free installation.

Design and Compatibility

Vertical brackets are used to support cable trays in vertical orientations, such as wall-mounted or floor-to-ceiling installations. They are compatible with wire mesh trays 6 inches and wider, and for tray widths of 18 inches or more, two supports are recommended to ensure stability and load distribution . The brackets feature fold-over tabs that secure the tray without requiring additional hardware, simplifying installation and reducing assembly time .

Material and Standards

Vertical brackets are typically made from high-strength steel or other durable metals, often finished with powder coating or black paint for corrosion resistance and aesthetic integration with equipment . They comply with RoHS Directive 2011/65/EU and its amendments, ensuring material safety and environmental compliance . Depending on the manufacturer, brackets may also meet UL or CE standards for mechanical and electrical safety .
