

Structurally reserved grounding wire for distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. In industrial and civil circuit wiring, the stainless steel monitor enclosure device serves as the physical casing for various switches and control components. For field. Power from factory ground must be installed by a qualified electrician. Grounding of the units: Attach a ground wire from one of. Grounding is a mechanism to protect distribution equipment and people under normal operating conditions, abnormal operational (overcurrent and overvoltage) responses, and hazardous conditions such as shocks. Grounding is necessary to assure correct operation of electrical devices, to assure safety. Additional rules for the grounding and bonding of industrial control panels include the sizing of ground conductors and the conditions that dictate when power supplies and transformers must be grounded.
