

Switches for distribution boxes

Article Overview

Distribution boxes typically use main switches, circuit breakers, and isolation switches to ensure safe and efficient electrical distribution.

Main Switches

The main switch or main breaker controls the entire electrical supply to the distribution box. It allows you to disconnect all power to the building during emergencies or maintenance. Main switches are rated for the maximum current capacity of the electrical service and provide a centralized point to shut off electricity safely .

Circuit Breakers

Circuit breakers are automatic switches that protect individual circuits from overcurrent conditions. When a circuit experiences an overload or short circuit, the breaker trips, interrupting power flow. Modern breakers can be reset manually after resolving the issue. They are essential for protecting appliances and wiring from damage .

Isolation Switches

Isolation switches, also called disconnect switches or isolators, provide a visible break in the electrical circuit. Unlike circuit breakers, they do not operate under load but ensure that a section of the circuit is completely de-energized for safe maintenance or inspection. Many isolation switches support lockout/tagout (LOTO)...
