

Testing of a Spectrometer in Myanmar

Article Overview

Spectrometer testing in Myanmar can be conducted at ISO/IEC 17025:2017 accredited laboratories, such as the National Analytical Laboratory, with support from local distributors for equipment and training.

Accredited Laboratory Services

The National Analytical Laboratory under the Department of Research and Innovation in Myanmar has achieved ISO/IEC 17025:2017 accreditation for testing metals like Copper, Iron, Manganese, Nickel, and Zinc in water using a Flame Atomic Absorption Spectrometer (FAAS). This accreditation ensures reliable and internationally recognized testing results, making it suitable for research, industrial, and regulatory purposes (Department of Research and Innovation, 2025) . The laboratory provides comprehensive testing and support services for spectrometer-based analyses.

Laboratory Testing Companies

Several private laboratories in Yangon offer testing services that may include spectrometer analysis. For example, LUDU Molecular & Diagnostic Center operates multiple ISO 9001:2015 certified laboratories in Yangon and Mandalay, providing a wide range of analytical and diagnostic services (LUDU, 2026) . Additionally, Myanmar Quality Control coordinates product testing and certification through accredited laboratories, handling sample collection and reporting for imported goods (Myanmar Quality Control, 2026) .
