

The best bridge structure in Lebanon

Article Overview

The Mudeirej Bridge is widely regarded as one of the most significant and impressive bridge structures in Lebanon due to its height, engineering, and strategic connectivity.

Overview

The Mudeirej Bridge, completed in 1998, was originally the tallest and highest bridge in Lebanon and the Middle East, standing at approximately 75 meters (246 feet) above the ground . It was constructed as part of former Prime Minister Rafik Hariri's vision to modernize Lebanon's infrastructure and improve connectivity between Beirut and Damascus via the Beirut-Damascus Highway . The bridge links the Mount Lebanon region with the Bekaa Valley, serving as a vital transportation route for both local and international traffic .

Engineering and Construction

The bridge's design and construction involved advanced engineering techniques. During its reconstruction after the 2006 conflict, specialized methods were applied, including cold weather concreting to ensure concrete strength in low temperatures, controlled implosion for partial demolition of damaged sections, and fiber-reinforced polymer (FRP) wrapping to repair piers . These techniques highlight the bridge's structural resilience and the complexity of its restoration.
