

The capacity of the 24-core fiber optic distribution box is

Article Overview

A 24-core fiber optic distribution box typically measures around 300–400 mm in height, 250–350 mm in width, and 80–150 mm in depth, depending on the model and manufacturer.

Overview

A 24-core fiber optic distribution box (FDB) is designed to manage and protect up to 24 individual fiber strands in telecommunications networks, often used for FTTH (Fiber-to-the-Home) or FTTx deployments. These boxes are suitable for both indoor and outdoor installations, with many models offering IP55 to IP65 protection against dust, rain, and environmental hazards. They typically accommodate SC adapters, PLC splitters, and patch cords, providing a central point for splicing, splitting, and connecting fibers.

Typical Dimensions

While exact dimensions vary by manufacturer, most 24-core FDBs fall within the following ranges:

- Height: 300–400 mm
 - Width: 250–350 mm
 - Depth: 80–150 mm
- These sizes allow for wall, pole, or aerial mounting, and some models feature sliding adapter holders for easier installation and maintenance. The...
