

The function of the dual-core pigtail protection box

Overview

A robust steel fiber pigtail box with dual cable entry, integrated splice tray, and organized routing channels for secure fiber termination. Available in multiple core configurations, the box supports flexible mounting options and offers reliable protection and streamlined fiber. This 2-core optical termination box features a sliding cover design, providing high protection for fiber connection joints to minimize the risk of damage. Characterized by having an optical fiber connector on one end and a bare fiber end on the other, they are primarily used to connect optical transceivers or other optical. The 2 port surface mount fiber enclosure serves as termination point designed to joint drop cable and pigtail in home or office for wall mount or surface mount installation. It fully supports mechanical/fusion splicing, termination, and cable management within a single, compact indoor unit. The. A fiber management system in a single, dual, or quad configuration frame that combines the highest manageable density and is easily scalable with SC, LC, LSH or MTP ® connectivity.
