

The wireless router connected to fiber optic cable is very slow

Overview

There are four common causes for this: bandwidth contention, signal interference, incompatible WiFi routers, or slow devices. This is referred to as contention and it is. The fiber-optic cables are made up of multiple fibers, each capable of transmitting data at speeds of up to 10 Gbps (gigabits per second). The data is transmitted through the fiber cables to a network hub, where it's converted into a digital signal and sent to your device via a Wi-Fi router. Fiber. FTTP connects homes and offices directly to fibre optic cables which, using light pulses as signals, can carry data very quickly. The best way to find the source of your slowdown woes is to run a few speed tests. Fiber optic internet promises blazing-fast speeds, transforming online experiences from frustratingly slow to seamlessly smooth.
