

Thickened Cable Tray Tee

Article Overview

A thickened cable tray tee is a reinforced connector, typically 2.0mm thick, used to branch cable runs into three directions while ensuring durability and proper ventilation.

Overview

A thickened cable tray tee is designed to connect three cable tray sections at perpendicular angles, allowing organized distribution of cables in electrical installations. These tees are available in equal or unequal dimensions to accommodate different tray widths and layouts. They are particularly useful in heavy-duty or high-load applications where standard thickness trays may not provide sufficient strength.

Material and Construction

- **Materials:** Mild steel (pre-galvanized or hot-dip galvanized), stainless steel (grade 1.4404 / 316L), and powder-coated steel.
- **Thickness:** Typically 2.0mm, providing enhanced structural integrity and load-bearing capacity.
- **Design:** Perforated for airflow, which helps prevent cable overheating and extends cable lifespan.
- **Side Height and Width:** Common dimensions include 75mm side height with widths ranging from 600mm to 750mm, depending on the manufacturer.
