

Vertical Upward Curving Cable Tray Elbow

Overview

This model is a vertical 90 degree up-turn bend transition tray. Connects to any ASP cable tray with splice clamps provided. Standard depth is 4" with optional depth of 6". These systems have 1 1/8" wide side. Zero Tangent Fittings Tangent eliminate the wasted space in tightly packed areas, allowing more tray runs to distribute the heat. Mill-galvanized steel elbow fitting for cable support, NEMA VE-1 tested. These structures, typically made from materials such as steel, aluminum, or fiberglass, are designed to support and protect cables, wires, and other. Ladder Rack Curved Sections (cULus Classified) provide a vertical (plane) change in direction. Vertical elbows facilitate the movement of cable runs between different elevations, such as moving from a ceiling run down to a control panel or up to another floor. Optimal Radius: Standard 300mm.
