

Warranty on 200GB optical router

Article Overview

Most optical routers, including TP-Link, Cisco, and Linksys models, come with a limited warranty covering defects in materials and workmanship, typically requiring proof of purchase and original ownership.

TP-Link Warranty

TP-Link provides a limited warranty for eligible products purchased in the United States, covering failures due to manufacturer defects in devices, antennas, and internal components. Coverage begins from the date of original purchase and is only valid for the original purchaser. Second-hand, refurbished, or products sold by unauthorized resellers are generally not covered. Warranty claims require a valid proof of purchase and the product serial number. Replacement products are typically factory refurbished. Warranty periods vary by product category, with some business-class or discontinued products having a 5-year limit from end-of-life, while others may have a limited lifetime warranty for internal parts only .

Cisco Warranty

Cisco routers are covered under hardware warranties that guarantee the product is free from defects in material and workmanship under normal use. The standard warranty may be 90 days, but some products have longer coverage. Cisco warranties generally do not include software updates or technical support unless purchased separately. Replacement or repair is provided by Cisco or its designated representative, and the remedy is typically limited to repair, replacement, or refund of the purchase price
