

Waterproof electrical distribution box for bathroom

Article Overview

Main electrical panels cannot be installed in bathrooms, but waterproof junction or distribution boxes can safely protect wiring in damp areas.

Safety Considerations

Installing a full electrical panel or breaker box in a bathroom is strictly prohibited by the National Electrical Code (NEC) due to the high risk of electrocution and fire from moisture exposure. NEC Section 240.24(E) explicitly forbids overcurrent protective devices, including circuit breakers, in bathrooms of dwelling units, dormitories, and guest suites. Steam and humidity can condense on metal enclosures, increasing the risk of short circuits, corrosion, and shock hazards if someone touches the panel while standing on a wet floor .

Suitable Alternatives

For wiring connections in bathrooms, waterproof electrical distribution or junction boxes are recommended. These boxes are designed to protect electrical connections from moisture, dust, and physical impact:

- IP Ratings: Look for boxes rated IP65 to IP66, which ensure protection against water jets and dust ingress .
- Materials: Commonly made from ABS plastic or polycarbonate, which are lightweight, durable, and resistant to corrosion and high temperatures
