

What are some network security equipment products

Article Overview

Network security equipment can be categorized into perimeter, internal, and specialized devices, each designed to protect, monitor, and control network traffic against cyber threats.

1. Perimeter Security Devices

These devices protect the network boundary and prevent unauthorized access from external sources.

- **Firewalls:** Monitor and control incoming and outgoing traffic based on predefined rules. Types include packet-filtering, stateful inspection, next-generation firewalls (NGFW), and web application firewalls (WAF) that provide deep packet inspection and application-level security .
- **Unified Threat Management (UTM) Appliances:** Combine multiple security functions such as firewall, antivirus, intrusion prevention, and content filtering into a single device .
- **Virtual Private Network (VPN) Gateways:** Encrypt data for secure remote access, protecting communications over public networks .

2. Internal Network Security Devices

These devices safeguard internal network segments and monitor traffic for suspicious activity....
