

# What is pigtail fabric

## Article Overview

"Putting pigtail fabric" generally refers to twisting, tying, or bundling fabric into small sections resembling pigtails, rather than a standard textile term.

In sewing and fabric handling, the term pigtail usually describes a hairstyle, but in the context of fabric, it can be used informally to describe small twisted or tied sections of fabric. This technique might be applied for:

- Tie-dyeing or fabric dyeing: Sections of fabric are twisted or tied into "pigtails" to create patterns when dye is applied.
- Storage or transport: Long strips of fabric may be twisted into small bundles to prevent tangling or wrinkling.
- Decorative purposes: Small tied sections can be used in crafting or textile art to create texture or volume. It is important to note that "pigtail fabric" is not a standard term in fabric glossaries or sewing references, unlike terms such as selvage, bias, or crepe . Therefore, its meaning is context-dependent and usually descriptive rather than technical. In practice, if someone instructs you to "put pigtail fabric," they likely mean to tie or twist the fabric into small, narrow bundles for a specific purpose, such as dyeing, storage, or creating a textured effect. This usage borrows the visual analogy from pigtail hairstyles, where hair is divided and tied into sections . Understanding the context—whether for crafting, dyeing, or sewing—is key to applying this technique correctly.
