

Wiring Method for Level 3 Distribution Box in Mozambique

Article Overview

A three-level distribution box should be wired with a main isolator, RCCB, and MCBs for each subcircuit, with proper neutral and earth connections distributed to all levels.

Overview of a Three-Level Distribution Box

A three-level distribution box typically consists of:

- Main isolator – the primary switch to manually disconnect the entire system.
- RCCB (Residual Current Circuit Breaker) – protects against current leakage and electric shock.
- MCBs (Miniature Circuit Breakers) – protect individual subcircuits from overload and short circuits.
- Neutral and Earth links – distribute neutral and earth connections to all subcircuits.
- Busbars or DIN rails – for mounting breakers and organizing wiring .

Wiring Steps

- Incoming Supply Connection
 - Connect the phase (live) and neutral lines from the utility meter to the main isolator.
 - Ensure the isolator is rated for the total load of the distribution box .
- RCCB Installation
 - Connect the output of the main isolator to the RCCB.
 - The RCCB neutral output goes to the neutral busbar, and the phase output is distr...
